

Application No. 09/618,066  
Attorney Docket No. 5725.0656-00

# **AMENDMENTS TO THE SPECIFICATION:**

Please amend the Abstract as follows:

A process for ~~limiting the migration~~ non-migrating deposit of a ~~lipstick or a foundation composition~~ composition for making up at least one keratinous material,  
such as, for example, a lipstick or a foundation, comprising including in said ~~lipstick or a foundation composition~~ a composition for making up at least one keratinous material at least one liquid continuous fatty phase comprising at least one dyestuff and at least one structuring polymer chosen from polymers of the following formula (I):

in which n is an integer which represents the number of amide units such that the number of ester groups present in said at least one structuring polymer ranges from 10% to 50% of the total number of all said ester groups and all said amide groups comprised in said at least one structuring polymer, R<sup>1</sup>, which are identical or different, are each chosen from alkyl groups comprising at least 4 carbon atoms and alkenyl groups comprising at least 4 carbon atoms, R<sup>2</sup>, which are identical or different, are each chosen from C<sub>4</sub> to C<sub>42</sub> hydrocarbon-based groups with the proviso that at least 50% of R<sup>2</sup> are chosen from C<sub>30</sub> to C<sub>42</sub> hydrocarbon-based groups, R<sup>3</sup>, which are identical or different, are each chosen from organic groups comprising atoms chosen from carbon atoms, hydrogen atoms, oxygen atoms and nitrogen atoms with the proviso that R<sup>3</sup> comprises at least 2 carbon atoms, and R<sup>4</sup>, which are identical or different, are each

chosen from hydrogen atoms,  $C_1$  to  $C_{10}$  alkyl groups and a direct bond to group chosen from  $R^3$  and another  $R^4$  such that when said at least one group is chosen from another  $R^4$ , the nitrogen atom to which both  $R^3$  and  $R^4$  are bonded forms part of a heterocyclic structure defined in part by  $R^4-N-R^3$ , with the proviso that at least 50% of all  $R^4$  are chosen from hydrogen atoms, and methods for making up the ~~lips and/or skin~~ at least one keratinous material using the same.
